

Jaime Ivan Tong

San Francisco, CA 94116 | jaimeivantong@gmail.com | [linkedin.com/in/jtong2026](https://www.linkedin.com/in/jtong2026)

Software Engineer

Data-driven and collaborative **Software Engineer** with 15+ years of experience optimizing global infrastructure, automation pipelines, and enterprise application ecosystems. Proven track record of streamlining cross-functional workflows, coaching/training, and safeguarding data compliance. Expert troubleshooter dedicated to maximizing system efficiency, reducing operational overhead, and delivering exceptional end-user support.

CORE COMPETENCIES

- **Tools & Platforms:** JIRA, Confluence, ServiceNow, VersionOne, TasktopSync, Clarity PPM, Zendesk
- **DevOps & Automation:** Jenkins, Ansible, Docker, Kubernetes, RancherOS, OpenShift, Git, n8n, Webhooks, API Integration(REST), Tailscale
- **Languages & Scripts:** Python, Bash, Node.js, Ruby, Perl, SQL
- **Databases & Storage:** MySQL, Veritas NetBackup, Veeam, Data Center Migration

PROFESSIONAL EXPERIENCE

MACYS.COM INC | San Francisco, CA

Software Engineer | System Engineer | System Analyst | July 2015 – April 2020

- **Performance Recognition:** Awarded **Macy's Bright Spot Bonus** for exceptional cross-functional user support and resolving complex technical roadblocks to optimize dashboard environments.
- **Dashboard Development:** Designed, built, and architected pipeline for internal Node.js dashboard providing the broader technology organization with real-time visibility into financial costs, delivery metrics, timesheet tracking and release management.

- **Process Automation/Technology:** Introduced Jenkins pipelines to the JIRA administration team to automate Clarity PPM fiscal year projects, seamlessly integrating project listings with the JIRA ticketing system.
- **Data-Driven Optimization:** Reduced front-end Docker image sizes for the team dashboard by **76% (from 906 MB to 205 MB)**, accelerating deployment pipelines and hardening environment security.
- **Large-Scale Migrations:** Successfully migrated 1,700+ global users across three distinct agile project management tools (Mingle, VersionOne, JIRA) over a 7-year tenure with **minimal operational downtime**.
- **Security Integration:** Partnered with the Application Security team to integrate the VersionOne API, automating ticket creation whenever automated code scanners flagged vulnerabilities in build pipelines.
- **3rd Party Integrations:** Migrated and implemented third-party TasktopSync, Datastackr (real-time data warehouse tool) integrations with Clarity PPM, ServiceNow, and VersionOne.
- **Monitoring & Alerting:** Architected a unified monitoring dashboard by integrating RancherOS environments with Splunk, tracking systemic failures to eliminate bottlenecks and deploy automated email alerting.
- **Team Leadership:** Designed deployment workflows and trained 4 core developers on troubleshooting and deploying new releases using Jenkins, JFrog Artifactory, RancherOS, OpenShift, and Kubernetes.

MACYS.COM INC | San Francisco, CA

Application Administrator | May 2013 – June 2015

- **Platform Ownership:** Served as primary Agile tools owner, managing cross-platform integrations between JIRA, MySQL, TasktopSync, Datastackr, ServiceNow, Tableau, OracleDB, and Clarity PPM for 1,700+ onshore/offshore users.

- **Cost-Savings Automation:** Authored a custom Ruby script to automatically expire inactive user profiles, maintaining strict licensing thresholds, tightening security compliance, and **saving \$70,000 annually** in licensing fees.
- **Coaching & Training:** Partnered with the Agile Director to deliver hands-on technical guidance on Agile best practices, supporting 1,700+ onshore and offshore developers, Project Managers (PMs), and Program Managers (PGMs) across all deployment lifecycles and release schedules.
- **Scripting Automation:** Developed an automated timesheet compliance utility in Ruby on Rails for the finance team and wrote automated Ruby scripts to flag database backlog items tagged to incorrect projects or outdated schemas.
- **Security Enhancement:** Collaborated with offshore DevOps teams to implement Single Sign-On (SSO) for VersionOne, streamlining user authentication and enhancing protocols.
- **Idea Space:** Conducted regular user surveys from Project Managers to the Release Engineering Director to identify and remove team impediments.
- **Streamline Development:** Delivered Proof of Concept (POC) demonstrating use of modern containerization and orchestration tools (Docker, Jenkins, Kubernetes, Chef) to help the developer team streamline internal Ruby dashboard deployments.

BEDROCK TECHNOLOGY PARTNERS | Sunnyvale, CA

Storage Backup Specialist | Automation Scripting | November 2012 – April 2013

- **Disaster Recovery Architecture:** Designed, scaled, and implemented offsite storage strategies, recovery procedures, and strict data retention policies tailored to diverse enterprise client requirements.
- **Infrastructure Optimization:** Installed, configured, and optimized new backup software features, server patches, and created comprehensive disaster recovery documentation for remote system administrators.

- **Automated Forecasting:** Customized NetBackup OpsCenter SQL reports to provide automated, detailed data forecasts regarding weekly tape consumption rates and historical system failures.

YAHOO INC | Sunnyvale, CA

Storage Analyst | Storage Engineer | October 2010 – July 2012

- **Cost-Savings Automation:** Authored a custom Perl script for the "Getting Fit Project" to reduce offsite container storage costs, successfully recycling and destroying over **100,000+ outdated media tapes**.
- **Financial Forecasting:** Generated and forecasted quarterly analytical reports for finance and storage infrastructure teams regarding media tape usage, storage consumption, and server hardware inventories.
- **Decommissioning & Auditing:** Supported the corporate "Rewire Project" by tracking, auditing, and documenting idle systems requiring decommissioning; updated the central SQL tracking infrastructure database to ensure data accuracy.
- **Proactive Alert Monitoring:** Designed and deployed a user-friendly Perl script to automate log parsing, monitor consecutive backup failures, and immediately alert system administrators to streamline incident response.

MARVELL SEMICONDUCTOR INC | Santa Clara, CA

UNIX System Administrator | Scripting Automation | January 2007 – February 2010

- **Cost Optimization:** Re-negotiated media tape pricing and implemented a recycled retention policy, saving the company **\$450,000** over three years, with an additional **\$150,000 saved within six months** via recycled retention policies.
- **Data Center Deployment:** Designed, site-planned, and managed the physical deployment of a 3,000-tape capacity SL3000 library at corporate headquarters; configured Cisco SAN switches to support concurrent, multi-terabyte backups across EMC, NetApp, and Agami filers. Successfully upgraded library expansions and drive firmwares (AIT-2, AIT-3, LTO-3, LTO-4) and migrated critical job policies and catalogs between backup servers with zero data loss.

- **Global Tier-3 Support:** Provided remote-site technical support (US, Germany, China, India) to establish robust library infrastructures, manage firmware upgrades, and configure multi-pathing to eliminate single points of failure.
- **Compliance & Audits:** Successfully managed critical, time-sensitive SOX compliance data restores at corporate headquarters and remote sites, restoring **100% of requested data** ahead of audit deadlines. Utilized Perl scripts to maintain a precise tracking database for on-site and off-site media assets.
- **Capacity Planning Utility:** Developed a custom MySQL-backed data tracking tool and web interface to monitor weekly data volumes, graphing data growth trends to empower managers with accurate capacity planning metrics.
- **Onboarding & Leadership:** Served as the primary system administrator, Trained and onboarded new technical hires on server backup architectures (Netvault, NetBackup), media purchase workflows, and Windows/Oracle SOX compliance protocols. Assisted international remote sites with legacy library retirements, data center relocations, and comprehensive system shutdown/bring-up documentation.

UCSC RESNET | CTSS DEPARTMENT , Santa Cruz, CA

Senior IT Residential Technician | Contract Technical Support Specialist | Feb 2005 – November 2005

- **Team Leadership & Training:** Selected as head technical trainer for incoming students; managed a team of three IT technicians to onboard students, configure LAN connections, router setups, and network wiring.
- **Cross-Platform Support:** Provided on-site and remote hardware, software, and virus removal support for faculty and student workstations across PC, Mac, and laptop platforms.
- **Coaching & Training:** Conducted educational presentations for incoming students on network self-troubleshooting protocols and system monitoring utilities.

- **Infrastructure Management:** Maintained university computer labs, racked server infrastructure, managed server tape backups (AIT-2, AIT-3), and monitored network health using "Big Brother" utilities.
- **Incident Management:** Managed the departmental helpdesk ticketing queue, resolved complex software/hardware incidents, and efficiently delegated tasks to junior technicians.

EDUCATION

Bachelor of Arts (BA)

University of California, Santa Cruz | Santa Cruz, CA

PROFESSIONAL DEVELOPMENT

- **Node.js Application Development** (Udemy Training)
- **Ruby Fundamentals** (Advanced 3-Day Technical Training Course)
- **Symantec Veritas NetBackup 6.0** (Enterprise Windows/UNIX Training)
- **TasktopSync Platform Integration** (Technical Training)
- **VersionOne Agile Toolsets** (Administrator Training)
- **Open Source Code Portfolio:** github.com/thraddash
 - `n8n-Workflow-Engine`: Built a self-hosted n8n (Docker) environment executing multi-app integrations; synchronized Zendesk to Slack via 5-minute triggers and automated document routing across Google Drive and Spreadsheets.
